
scheduleView

```
public void scheduleView()
```

This method runs when the Supervisor has logged into the website, and has selected to navigate to the main schedule view of the WebAgenda system.

selectWorkgroup

```
public void selectWorkgroup()
```

After the view is loaded, the supervisor selects a specific workgroup to view the schedule for.

Class *Workgroup*

```
public class Workgroup
```

A workgroup is a collection of employees, grouped together by a supervisor. It can be used to view workgroup specific schedules, or to print reports on a specific set of employees rather than all that the supervisor is in charge of.

Field Summary

| | |
|----------------------------------|--|
| private Object | employees A list of the employees that are in the workgroup. |
